PAI BOAT

Marine Line:

Rubbing & Polishing Compounds, Wax, Cleaners & Protective Compounds for Gel Coat and Marine Painted Surfaces. The major application sectors are Marine, Aviation & Coach Industry - Boats, Luxury Yatch, Aircrafts, Seaplanes etc.

PAI CRISTAL ITALIA s.r.l. presents an innovative line of compounds addressed to the polishing, maintenance & protection of gel coat and marine paint surfaces.

The wide range of specialized products, created in the modern and equipped Research and Development Department of the company, has been studied to answer the requirements of a market that pays closer and closer attention at the quality of the surface finishing.

PAI CRISTAL ITALIA is nowadays able to provide a wide range of technically advanced rubbing compounds and polishes, formulated on the basis of the users' needs and in cooperation with professional companies of the marine sector, which have placed their experience of application and evaluation at our disposal. This line concretely helps to solve some important problems that usually happen in the GRP applications and working processes.

The efforts made and the attention paid at a good safeguard of environment and users' health is of peculiar interest and relevance. All the products are in fact water-based and thus take care about the worldwide ecology. Moreover, no more bad smell at work!

Main features of PaiBoat Line, such as high quality and specific properties of the selected components, guarantee easy and quick usage and excellent results as good clearness, colour depth, high gloss shine and long-lasting protection of gel coat. The right means to provide good finishing, this line restores and maintains gel coat properties and it has become the first choice of professionals and hobbyists, when it comes to Marine Sector Surface Finishing..

PAICRISTALITALIA®

NW1

FINE RUBBING COMPOUND

- This is a Moderate cutting & Moderate gloss compound for gel coat that has low solvent emissions.
- It removes sand scratches very fast and well, according to the hardness of treated resins and without overheating the surface.
- It also provides reasonable gloss level and is recommended to be followed by a shining paste, if required.
- NW1 has a rapid glossy action and leaves a deep and clear shine without haze and scratches. It may be used both on bottoms and moulds.
- Need of a very small quantity both by hand or polisher with a wool or foam pad.

NRG POLISH MICRO ABRASIVE POLISH WITH WAX

This compound is based on a unique water-based degreasing formula, having multiple effective properties of cleaning, excellent shining, restoring & long lasting protection for gel coats & fibreglass. It helps in preventing fading caused by UV rays, natural elements and salt water. It is an excellent hull cleaner as it removes and dissolves deep black streaks, oxidation, grime and ground-in dirt, restoring the gloss of the gel coat. It can also be applied on metal surfaces, especially to prevent oxidation layer. It's degreasing and protective properties acts on hull leaving a slick finish and radiant shine for a long time. It is usually applied by polisher with a wool and foam pad, but can also be applied by hand.
